

JØTUL F 602

Eva Horton, the pioneering importer of Jøtul stoves in North America, shared the warmth of this stove with her neighbors in Maine in the early 1970s. Her early efforts led to Jøtul earning the dominant position in the cast iron hearth industry that it still enjoys today. The Jøtul F 602 CB "Little Giant" is the very definition of classic and comprises half of our Heritage line of wood stoves.

JØTUL wood catalog 2017 / PAGE 30 Jøtul wood stoves and inserts efficiencies have been EPA tested and certified.

HHV value represents a calculation where the water product in the combustion gas is considered in the liquid form while the LHV is calculated with the water product considered in the vapor form. Simply put, HHV mes all the water component is in a liquid state (condensed) at the end of combustion and that heat recovered from that condensation can be put to use. With that considered the efficiency value for HHV will be ower due to a higher quantity of energy to be considered relative to the appliances measured temperature release.

The maximum heat output value is derived from the certification test data and represents a refueling cycle more representative of homeowner usage than that prescribed by the test protocol. The maximum heating efficiency of XX% (either HHV or LHV) was achieved at a burn rate of XXXXX Btu/hr. This value is a component of the weighted average efficiency calculation.
