

MODEL 1600 STOVE

rich tradition.
low emissions.
quality build.

High Valley Stoves by Stoll continue a rich tradition of quality, design, and workmanship at very cost effective prices. More and more people are choosing to conserve fossil fuels by burning biomass instead. An energy efficient, biomass stove can pay for itself in a short while; at the same time minimizing use of our limited natural resources. Heavy duty construction, beautiful design elements, and low emissions set High Valley stoves apart from the competition. With catalytic and non-catalytic type stoves available as freestanding units or as fireplace inserts, High Valley offers a configuration that will fit your heating needs.

All High Valley Stoves are built with a dedication to quality and special emphasis on American Made materials, rugged construction, and top tier customer service.

FEATURES OF HIGH VALLEY STOVES

- LARGE HEARTH WINDOW:** A large pyro-ceramic window provides an unobstructed view of the fire and adds an aura of warmth to any room.
- GLASS AIR WASH SYSTEM:** Unique air wash system maintains a flow of air against the glass which significantly reduces buildup and discoloration on the glass.
- HEAVY DUTY CAST IRON DOOR:** Fully gasketed with an adjustable door latch to maintain an airtight seal. Cast iron is used for added strength and durability.
- LARGE, QUALITY FIREBOXES:** Constructed of 1/4" thick, high quality, U.S. steel, lined with firebrick. Allows longer burn times and heating up to 2700 sq. ft.*
- LOW EMISSIONS:** Special design and catalysts allow for low emissions, lower than the strictest state standards.*
