

Freestanding Fireplaces

WITTUS
FIRE BY DESIGN

Design

Using ergonomic intelligence and pace-setting style savvy, Romotop designer Vlastislav Vyborny fast-forwards traditional ceramic hearths into aesthetic technology products of the 21st century.

Sleek, sexy curves, advanced engineering, and flawless performance are the essence of these wood burning fireplaces. Romotop approaches design the same way European auto makers approach high-performance sports cars.

Technology

A dedicated assembly facility at the manufacturing plant transforms inspired designs into high-performance hearths for the contemporary home.

No shortcuts. Only top quality selected materials, versatile and sophisticated functionality: with 3-point locking systems, tempered torsion springs, and silent counterweight mechanisms for vertically sliding glass doors.

Tested to Washington State fireplace standards, and listed to UL 1482 in the US and ULC S627 in Canada, they are highly efficient and clean-burning.

Ceramic Tiles

The high-fired custom-cast ceramic tiles serve to absorb heat from the fire and then slowly release it over time. This provides a more constant, gentle heat. Maintenance of enameled tiles is very practical as well.

See standard colors at right (also in white and black). Custom colors also available.

Stromboli — Rotating Around

The oval Stromboli (shown at top and bottom left and on opposite page) floats on a pedestal and may be turned up to 360° so the panorama of flames can be enjoyed anywhere in the room.

With the glass window over 16" wide and nearly 20" high, the viewing area is one of the largest and combined with an effective airwash system, it insures that the glass always stays clean.

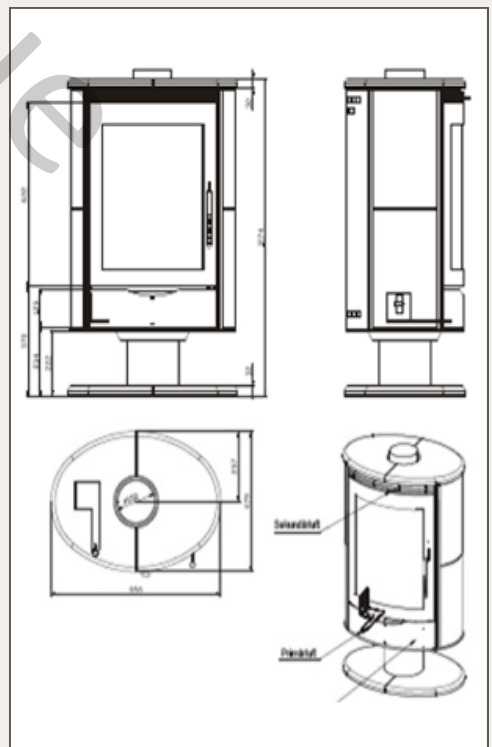

It measures 42" high x 26" wide x 19" deep and weighs 385 pounds.

Stromboli features cremone locking bolts.

Top vent only.

The Stromboli comes in gray steel. Cladding options include steel, tile (10 colors), or natural stone.

The Stromboli heats up to 38,000 BTUs; about 1,600 square feet.

Saba — Dynamic and Sleek

The subtle sophistication of the Saba wood fireplace/stove (shown at top and bottom right) is evident in the smooth styling and variety of colors and textures to truly make the stove unique.

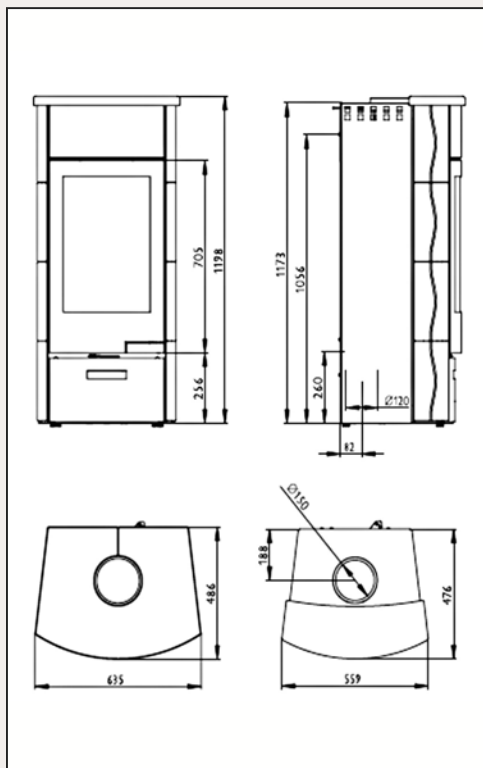

Special recessed spring handles enable ease of use and provide an artfully sleek finished look. Underneath is a drawer for storage.

Saba comes in gray steel. Cladding options include steel, tile (10 colors), or natural stone.

It measures 47" high (48" in the stone version) x 22" wide x 19" deep and weighs from 410-480 lbs.

Top or back vented.

It heats up to 38,000 BTUs; about 1,600 square feet.

Heckla — The Ultimate Cookstove

An attractive fireplace and an efficient oven. The Heckla was designed for both heating and baking.

The baking compartment can reach temperatures up to 500°F. It comes with an oven rack, a solid tray rack, and a baking stone.

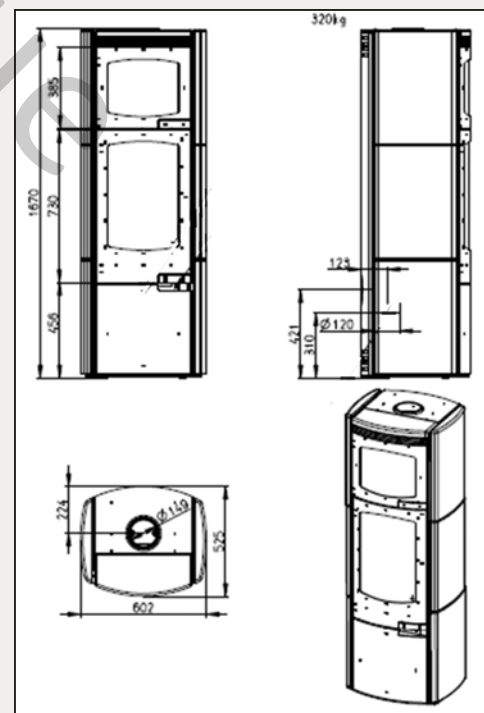

Special spring handles enable ease of use and provide a compact look. There is a drawer for storage underneath.

Heckla measures 66" high x 24" wide x 21" deep and weighs 400-700 pounds.

The body is made of high-grade steel in a gray steel finish. The cladding is available in 10 different tile colors or natural stone (shown at top left in tile and bottom left in natural stone).

Top vent only.

The Heckla heats up to 38,000 BTUs; about 1,600 square feet.

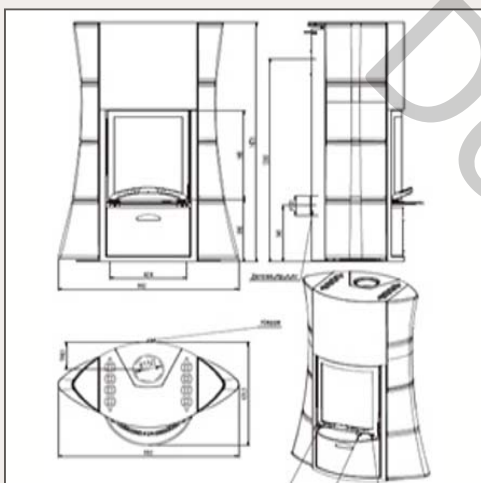

Etna and Elbrus

Etna — Sensual Flair

The Etna (shown at top right and back cover) is the winner of the 2007 ADEX Top Award for design and innovation.

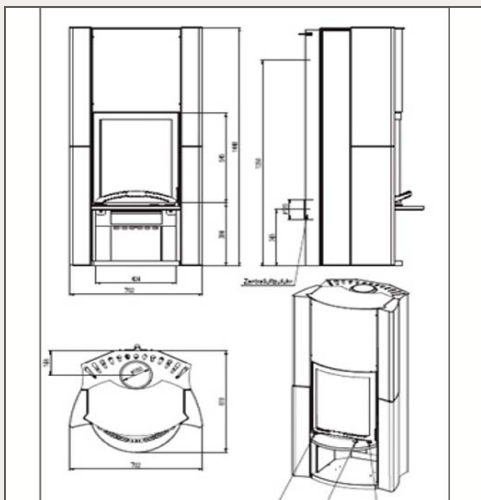

With an upward flourish and organic, curvaceous architecture, the Etna truly commands attention. The sculptural tiles are manufactured/designed to retain and slowly release heat into the room.

It measures 58" high x 39" wide x 23" deep and weighs about 850 pounds.

Elbrus — Pillars of Fire

Stately columns of colored ceramic tile frame the Elbrus (shown at bottom right and on the front cover) and establish the hearth as a fascinating decorating focus. The Elbrus measures 57" high x 28" wide x 23" deep and weighs about 600 pounds.

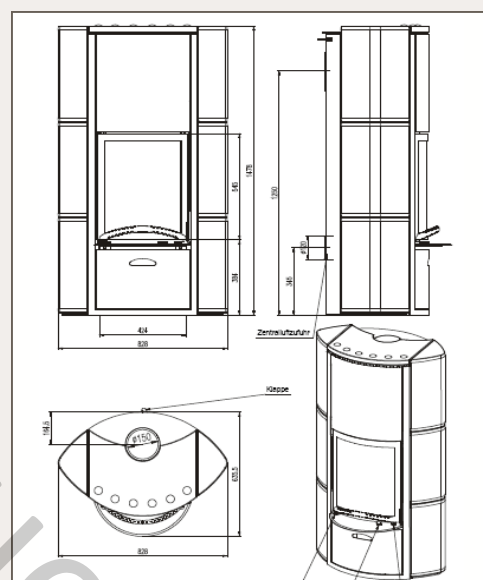

Vesuv — A Powerful Presence

Spacious lofts and grand living spaces come to life when an elliptical fireplace like Vesuv (shown at left) takes center stage.

The custom crafted ceramic sides and top plate serve to absorb heat from the firebox, and then release it steadily into the room. The roomy drawer below is for hearth supplies.

It measures 58" high x 32" wide x 23" deep and weighs 630-850 pounds.

The body and face of the Etna, Elbrus, and Vesuv are made of high-grade steel in gray. They have a huge 19" x 15½" fire window that glides effortlessly up and down via a silent counterweight system. A push-button finger latch releases the door outward for ease of cleaning.

The tile cladding is offered with ten color choices. The Vesuv is also available with sandstone cladding as shown at left.

They heat up to 38,000 BTUs; or about 1,900 square feet. Top or back vented.
