The Traditional Collection

Keep small to large spaces warm and comfortable with the highly efficient and durable Vista, Super, and Summit woodstoves. Designed for exceptional heat output and long burn times, the Vista is an excellent choice for heating spaces from 500 to 1500 square feet, the Super - our most popular stove - for heating spaces up to 2000 square feet, and the Summit for larger spaces and long, cold winter nights.

All Pacific Energy Wood Stoves come standard with these industry leading features:

- EPA2020 Certified
- Reliable, durable catalytic-free technology
- High capacity baffle system
- Multi-port combustion air injection system
- Air wash system for super clean ceramic glass
- Inside and outside combustion air capable
- Floating firebox for extended stove life
- Single-Lever Air Control
- Mobile Home Approved

DESIGN-A-FIRE
A SYSTEM BY PACIFIC ENERGY

Pacific Energy Wood Stoves are customizable in your choice of door and leg finishes. Available in Nickel, Metallic Black and Brushed Nickel.

VISTA LE

STANDARD FEATURES

304 Stainless Steel Baffle, Rails, Tubes and Flame Shield
East-West loading

DESIGN OPTIONS

Rich metallic black finish
Pedestal base
Legs: choice of three finishes
Arched door: choice of three finishes

VISTA CLASSIC LE

Porcelain enamel: choice of three colors
Legs: choice of three finishes
Arched door: choice of three finishes
Decorative trivet: choice of two finishes

PERFORMANCE OPTIONS

Temperature-Actuated Variable-Speed Blower
Easy-to-use ash disposal system (optional on Vista; included with Vista Classic)

SUPER LE

STANDARD FEATURES

Extended Burn Technology (EBT)
304 Stainless Steel Baffle, Rails and Flame Shield
North-South loading

BAFFLE SYSTEM

Pacific Energy is a recognized industry leader in “clean burn” technology, as exemplified in our unique high capacity baffle system for preheating secondary combustion air for re-burning. By burning the combustible elements in the air, we improve our stoves’ environmental performance while significantly reducing the amount of wood that is consumed.

FLOATING FIREBOX

Our floating firebox system is legendary in the industry. Solidly designed with stainless steel brick-support rails, it allows key parts to freely expand and contract, which reduces metal fatigue and adds years of life to the entire fireplace. The steel baffle (part of the clean-burning secondary combustion system) and the flame shield (which protects the stove top from intense heat) are all part of the floating firebox system.

- 1 FLAME SHIELD
- 2 BAFFLE
- 3 BRICK RAILS

KNIFE EDGE DOOR

A formed and welded knife edge opening creates a superior air tight seal to the door gasket while strengthening the stove face. This is a more labor intensive design but our experience has proven this is the best way to manufacture a fireplace.

ASH DUMP SYSTEM

Our self-sealing ash dump system, with its spring-loaded trap door provides a time saving, hassle-free ash removal solution that, frankly, has yet to be equalled. Pacific Energy’s machined steel, spring loaded ash removal systems is opened from outside the stove and closes automatically for safety and convenience when you’re done.

EBT EXTENDED BURN TECHNOLOGY

Our Extended Burn Technology, or EBT, precisely regulates secondary airflow based on vacuum created by the chimney for a longer, cleaner, more economical burn. This automatically adjusts the secondary combustion system, for a cleaner, more efficient burn and extended burn time. (Super LE and Summit LE models only)

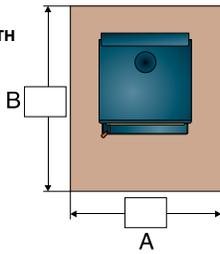

AIR WASH
A SYSTEM BY PACIFIC ENERGY

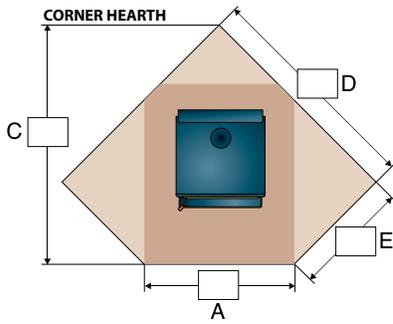

Pacific Energy developed the first effective airwash manifold systems, a design that flows pre-heated air to the glass surface to keep it clean. A refined design now creates a high-pressure zone in the center and forces air to flow from above and across the glass. Even at low air settings, we are confident that our airwash system is the most effective available. And that our glass doors are among the cleanest in the industry.
