

"EASY" Safety Pilot Lighting Controls The "EASY" system uses a common valve that offers many control options and the ability to upgrade functionality at any time (no need to replace the whole system). Controls provide convenient lighting as well as safety shut down in the event of an interruption in the gas supply or a flameout.

Manual Control (SPK3E)
Light burner and adjust flame height by turning knob.

Switch/Remote Ready Control (RPK3E)
Light burner with receiver switch or one of the five Wireless Transmitter Devices below. Adjust flame height by turning knob.

Variable Flame Height Remote Control (RMC1E)
Light burner and adjust flame height by pushing button.

ON/OFF Remote (SR-2R)

ON/OFF Remote with Thermostat (THR-2R)

Wall Switch (WS-2R)

Wall Thermostat (TS-2R)

Wall Timer (WT-2R)

Ceramic Log House for all remote receivers (RH2)

Crackler Fire Sound Generator. Includes RH2 (CF5SA1)

Measuring your fireplace

Chillbuster sets are available in 18, 24, and 30" sizes. For the best aesthetic and proper performance, your log set should be sized to your fireplace according to the following guidelines.

"A" - minimum 6" greater than log set size

"B" - not less than log set size

"C" - minimum 12" (16" for see-through fireplaces)

Please refer to specific model installation instructions, available at rasmussen.biz, for detailed fireplace

Also from Rasmussen...

Rasmussen produces one of the industry's most extensive line of vented gas log sets to fit any size fireplace and any decor, as well as the complete Solaire line of infrared gas grills. Ask your dealer or visit our website at rasmussen.biz for more information on all of our products.

Vent-free and reduced vent gas log sets

The Most Realistic Vent-free Heaters in the Industry

Chillbuster - Superior Heating with the Look of a Wood Fire

Everyone enjoys relaxing by the fire. But with most of the heat escaping up the open flue, a traditional fireplace makes a very inefficient heater. The Chillbuster line is designed and certified to operate vent-free, so the heat stays inside. Rasmussen's superior log detail and exclusive lance port, opposed louver burner create the most realistically pleasing wood fire look in a vent-free heater. A wide variety of log styles can be combined with our single, double or triple burner system to create just the appearance and heat output you're looking for, or opt for our new CoalFire™ line, for the old-world look of a coal-fired heater. No matter which set you choose, you can count on Rasmussen quality and safety.

- **Certified for Safety**

All Chillbusters are certified to ASNI Z21.11.2 standards with the lowest permitted levels of combustion products.

- **Integrated Oxygen Sensor**

Chillbusters all come equipped with an oxygen depletion safety pilot (ODS) for safe and reliable operation.

- **No Electricity Required**

Making the Chillbusters an excellent source of emergency backup heat.

- **Piezo Electronic Ignition**

Makes pilot lighting pushbutton simple

- **Versatile Flame-height Control**

The Chillbusters can be burned from a low glow to a high, full flame to adjust the amount of heat that you require.

- **Multiple Control Options**

There are three control styles from which to choose: "ME" models feature manual controls.

"SE" models are equipped with a switch that allows the use of an optional on/off remote control, wall thermostat, switch or timer (see back page).

"RE" models include a factory-integrated remote control that allows you to vary the flame height with the remote.

Four Generations of Pride and Tradition

It was 1907 when Rasmus Rasmussen, a Danish immigrant, opened his blacksmith shop on Philadelphia St. in Whittier, CA. In addition to more traditional blacksmith services, Rasmus quickly developed a sideline business making fancy fireplace tools and screens. Through the decades the business evolved and changed, Rasmussen Iron Works made everything from truck body parts, to steel buildings, to welding rod handles used to build ships for WWII. After the war, Rasmus' son, Ted Sr., opened a fireplace retail store in front of the manufacturing shop. Among the items he carried were gas logs.

It would be Ted Sr.'s son T.R. that would make a breakthrough in gas logs in 1958. After seeing a plumber trying to bubble natural gas through water to create a "dancing flame" effect for a restaurant's waiting area, T.R. developed the sand pan burner, which is still sold today and still provides the most realistic wood flame available in a gas log set. When he couldn't find a manufacturer to make logs for him, T.R. developed his own molding technique, using real wood logs as patterns and capable of reproducing the smallest bark detail in the finest refractory materials available.

There is now a fourth generation of Rasmussen working out of the facilities on Philadelphia Street. The innovations have continued, including the Chillbuster line of gas log heaters shown here. Through all the changes over the years, craftsmanship, value, and industry leadership have been the constants at Rasmussen Iron Works, Inc.

Chillbuster Log Sets can be installed in a wood-burning fireplace with the flue closed, in an approved vent-free firebox enclosure, or as a reduced vent unit. Available in 18, 24, and 30" sizes for natural gas or propane.

C1 Single Burner

(Front log is reversible - bark or split)

C5 Triple Burner

C7 Single Burner

C8 Dual Burner

Bark style log set

C8 Dual Burner

Birch style log set

DFC7 Single Burner

Double-face for see-through

Chillbuster CoalFire™ let you enjoy the traditional look of a coal burning fireplace without the mess, smell or cost. Coal chunks are cast and colored just like our logs for years of trouble-free use. Available in 15" and 19" sizes.

C9 with "Classic" Basket

C9 with "Moderne" Basket

C9 with "Americana" Basket

C9 CoalFire™ with coals is also available separately for use with the basket of your choice
